Profile

Results-driven, detail-oriented software engineering student proficient in Python, Java, C, and C++, along with a strong passion for front-end development. Skilled in Problem solving, algorithms and data structures. Seeking opportunities as a software engineer or developer to apply my technical skills to real world challenges

Projects

Online medical assistant system

An online medical assistant system provides virtual healthcare support by helping patients schedule appointments, access medical records, and receive basic health advice. It streamlines communication between patients and healthcare providers, improving overall efficiency.

Diabetes Risk Prediction

Developed a predictive model using patient data (e.g., age, BMI, glucose levels) to assess diabetes risk. Evaluated multiple algorithms, with the random forest model achieving highest accuracy. Demonstrated potential for AI in preventive healthcare.

Deep Learning-Based Prediction and Classification of Microplastics in Water Samples

Developed a deep learning-based system to detect and classify polyethylene (PE) microplastics in drinking water using machine learning techniques. Utilized data preprocessing, spatial analysis, and models including Random Forest, SVM, and Deep Neural Networks (DNN), achieving accurate contamination prediction and identifying high-risk regions to support environmental monitoring and water quality management.

Education

2019 – 2020	10th
Miryalaguda, india	<i>Abhyas Techno school</i>
	Percentage-98%
2020 – 2022	INTERMEDIATE
